

# Remember Me™

## Deluxe Ignition Triggered Safety System

MOMonBOARD.com 1-800-395-3957

### 1 LED Indicator/Button

∅ This dash-mounted light indicates to the vehicle operator that the system timer has been activated and shows, by using different flashing patterns, which mode the system timer is in. These flashing patterns are accompanied by specific beeping tones to audibly inform the operator of the state of the system timer. The red button can extend loading time, if needed.

### 2 Compact Strobe

∅ This bright white flashing strobe is installed in the interior windshield area of the vehicle. It is one of three attention-getting elements used when the system has entered an Alert state.

### 3 Vehicle Horn

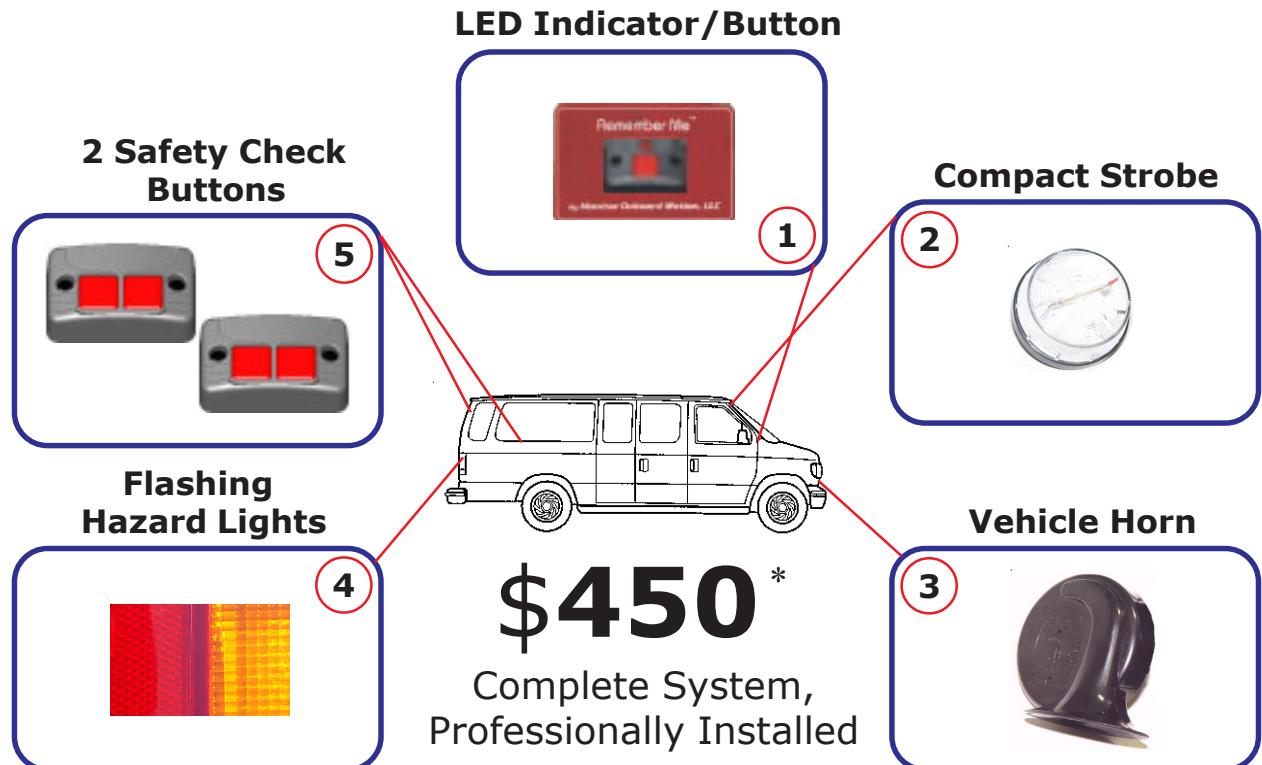

∅ **Remember Me™** utilizes the vehicle factory equipped horn as its audible attention-getting element in the case of an Alert event. A unique pattern of horn honking sets the **Remember Me™** equipped vehicle apart from other vehicle alarm horns.

### 4 Flashing Hazard Lights

- ∅ **Remember Me™** utilizes the vehicle factory equipped hazard lights as another of its visible attention-getting elements used when the system has entered an Alert state.
- ∅ The hazard lights are also used to promote a *Safer Loading Zone* during loading / unloading operations. When a door is opened and while the ignition is 'On', the hazard lights flash at a steady rate to bring attention to other drivers.
- ∅ The hazard lights change to a faster flashing pattern as the vehicle pulls away from the loading area to increase visibility to other drivers and to further promote operation safety.

### 5 Two Safety Check Buttons

∅ **Remember Me™** utilizes specially developed pushbuttons for system resetting. These unique double pushbuttons deter tampering and, by strategically positioning two of these buttons, resetting must be done from the interior of the vehicle. The vehicle operator can seamlessly integrate operation of these switches into a normal vehicle interior inspection.
